

BHAVYA SAMHITHA MALLINENI

(949) 547-0409 ◇ Austin, Texas

bhavyamallineni@gmail.com ◇ [LinkedIn](#) ◇ [GitHub](#) ◇ [Portfolio](#)

OBJECTIVE

Data Scientist with 3+ years of experience extracting insights from large-scale datasets to support infrastructure and product decisions. Proficient in Python, SQL, and statistical methods, including A/B testing and causal inference, with hands-on experience building dashboards, automated workflows, and cloud-based data pipelines on GCP and Snowflake. Adept at partnering with engineering and product teams to formulate quantifiable business questions, define and evaluate key metrics, and deliver actionable insights through scalable data models and visualizations.

EDUCATION

Master of Science, Electrical Engineering, University of Southern California August 2023 – May 2025
Los Angeles, California

Bachelor of Engineering, Electronics and Communication, Osmania University July 2017 – July 2021
Hyderabad, Telangana

SKILLS

Programming	Python, C++, SQL
Data Engineering	Apache Airflow, dbt, Snowflake, Teradata, BigQuery, Spark, Hadoop, ETL/ELT
Cloud & Platforms	GCP, AWS, Databricks, Kubernetes, Docker
Data Science & ML	Predictive Modeling, Feature Engineering, A/B Testing, Causal Inference, Time Series, PCA
ML Frameworks	TensorFlow, Scikit-learn, PyTorch, LightGBM, MLflow, LangChain, FastAPI, Hugging Face
Visualization	Power BI, Tableau, Mode, Streamlit, Domo, DAX, Plotly
Governance & Tools	Data architecture, schema design, data modeling, JIRA, Git, Agile

EXPERIENCE

Data Analytics Engineer October 2025 – Present
FloSports *Austin, Texas*

- Architected dbt models on Snowflake to standardize data marts and ETL/ELT workflows, reducing analytics delivery time by 20% and supporting revenue forecasting that drove ~12% growth.
- Built governed Mode dashboards with real-time KPI tracking, cutting ad-hoc reporting requests by 40% and enabling self-serve analytics for product and marketing teams.
- Led methodology shift from Frequentist to Bayesian A/B testing, removing fixed sample size constraints and reducing experiment analysis time by 25%, delivering clearer results to business stakeholders.
- Built a cash-based experimentation framework by analyzing 20+ historical experiments, enabling revenue-driven decision making that prioritized financial impact over granular engagement metrics.
- Partnered with product and marketing to validate metrics and resolve pipeline discrepancies, maintaining 99%+ data accuracy across core reporting datasets.
- Deployed Airflow pipelines to automate DSAR batch processing and monthly survey ingestion into Qualtrics, reducing batch runtime from 1 day to 2 hours and eliminating 36+ manual data pulls annually.

Artificial Intelligence Engineer Intern May 2024 – August 2024
Radical X *New York, New York*

- Built GenAI-powered pipelines using Vertex AI, LangChain, and Streamlit with prompt engineering, automating a manual grading process and achieving 89.6% accuracy in production.
- Optimized and Dockerized ML services on GCP, cutting inference latency by 20% at scale.

Analyst – Data Science Specialist

Deloitte USI Consulting

September 2021 – July 2023

Hyderabad, Telangana

- Automated daily ETL validation pipelines for Walmart's SAP PR4 to S4/HANA billing migration across 5 pipeline stages, flagging and reprocessing only failed records and saving ~1,200 engineering hours over the project lifecycle.
- Built automated validation scripts and documented transformation logic on Teradata, reducing QA turnaround by 27% and resolving cross-system data inconsistencies.
- Deployed OCR-based eligibility models and MLOps pipelines on GCP and Teradata to automate medical insurance form qualification for an AstraZeneca program, enabling real-time inference for 1,000+ users.
- Designed and ran A/B testing and causal analysis frameworks to measure campaign effectiveness, improving targeting precision across 3 business units.
- Integrated Flask APIs with analytics dashboards to surface ML model outputs for non-technical stakeholders, reducing dependency on manual data pulls for business reporting.
- Earned 2 Deloitte Performance Awards for automation innovation and predictive analytics impact across client engagements.

EXTRA-CURRICULAR

- Publish technical articles on Medium exploring the intersection of AI/ML and film, covering topics such as Vision Transformers, AI Agents, and computer vision applied to cinematography and shot classification. ([Read here](#))
- Create and edit short-form video content on Instagram and YouTube, blending storytelling and video editing to bring everyday narratives to life.

LEADERSHIP

- Led the Deloitte AI Academy weekly newsletter, published practical guides on ML tools and their applications, driving upskilling and awareness on leveraging AI to improve business strategy and decision making.
- Organized and led career guidance workshops for students as part of the Rotaract Club of Hyderabad, educating young learners on career pathways across multiple sessions.
